Solid carbide spirals

Standard and special solid carbide spirals

Standard and special solid carbide spirals

Kyocera Unimerco offers a wide selection of standard cutters for most applications.

Our standard programme ranges in size from diameters 6-25 mm with various cut lengths depending on the diameter.

We deliver positive and negative spirals as well as left or right hand rotations. Customized solutions for special applications are also available, ensuring the optimum tooling solution according to your special requirements.

Coating

Many companies benefit from longer tool life because they use the right coating technology.

Depending on type of coating and application, our coating can increase lifetime by factor 3 to 5.

Industrial tooling solutions

Kyocera Unimerco is a global manufacturer and distributor, providing standard and customized cutting tool solutions as well as know-how and optimization guidance for the manufacturing industry.

The company was founded in 1964 and has since expanded into 17 countries, with more than 700 employees.

Today the company is part of the Japan-based Kyocera Corporation.
